THE PROBLEM

Storage Crisis

AAA mobile games: 24–72 GB. Mid-range phones: 64–128 GB total.

Who Gets Hurt

Mid-range smartphone users — the largest & fastest-growing mobile gamer segment.

Publisher Pain

Large file sizes = abandoned installs, lower retention, lost revenue.

PRODUCT & POSITIONING

WHAT IT IS

- Streams only assets (textures, audio, geometry) — NOT full video
- Game logic runs locally → minimal latency
- Instant play: about 50 MB client shell vs. 20–72 GB full install
- Works on mid-range smartphones and PC without hardware upgrades

NOT full-game cloud streaming

Unlike GeForce NOW or Xbox Cloud Gaming — no server-side rendering, no video stream. Latency is near-zero because compute stays local.

POSITIONING

For mobile gamers with limited storage who refuse to compromise on game quality, Aegis Nexus is the only asset-streaming platform that delivers instant, full-fidelity gameplay — WITHOUT THE DOWNLOAD.

vs. Full-game cloud: lower latency · vs. Local install: zero storage burden

PRICING & CHANNEL STRATEGY

BASIC

\$11.99/mo

Standard streaming quality

Lower cloud priority

CLV \$43 · CAC \$27

PREMIUM

\$18.99/mo

High fidelity + priority access

Competitive with GeForce NOW

CLV \$94 · CAC \$35

Revenue Model

Monthly subscription + publisher revenue share from participating titles. Platform captures margin after cloud infra costs.

Partnership Channel: Samsung Gaming Hub (Xbox, GeForce NOW precedent)

CLV and CAC

- CLV - The total revenue or margin a business can expect from a single customer account throughout their relationship
- CAC - The total marketing and sales expenses required to acquire one new customer
- CLV: CAC - relationship between the CLV and the CAC, determining business profitability
 - 1:1 – Breakeven
 - 3:1 – Balanced
 - $\geq 5:1$ – Spending too little and miss opportunities to reach new customers

MARKETING COMMUNICATIONS

Campaign Theme: "Your Game, Your Device — No Storage, No Compromise"

Playable Ad (Primary)

- 60-sec streamed demo inside Meta/TikTok ad
- User plays before install — self-selects high-intent
- CTA: 'Start Playing Now — 50 MB Install'

Influencer Seeding

- Gaming micro-influencers (100K–1M followers)
- Focus: 'I freed up 70 GB on my phone' narrative
- Platform: TikTok + YouTube Shorts

App Store + Search

- ASO: keywords 'play without downloading'
- Google UAC targeting heavy-gaming genres
- Retargeting lapsed mobile gamers

Message hierarchy: Storage freedom (rational) → Instant play (emotional) → Publisher breadth (social proof)

ANALYTICS: CLV-DRIVEN TARGETING DECISION
